Supporting Texts

Text S1. The training sets of TripletRes and ResTriplet.

TripletRes and ResTriplet were trained on a subset of domain sequences from the SCOPe 2.07 database¹, which was collected using following filters: (1) Sequence length should be in the range of 30-400; (2) Resolution of the corresponding PDB structure should be better than 2.0 Å; (3) Maximum pairwise sequence identity is set to 30%. These resulted in 7,671 non-redundant domains that are used for training our pipelines.

Supporting Figures

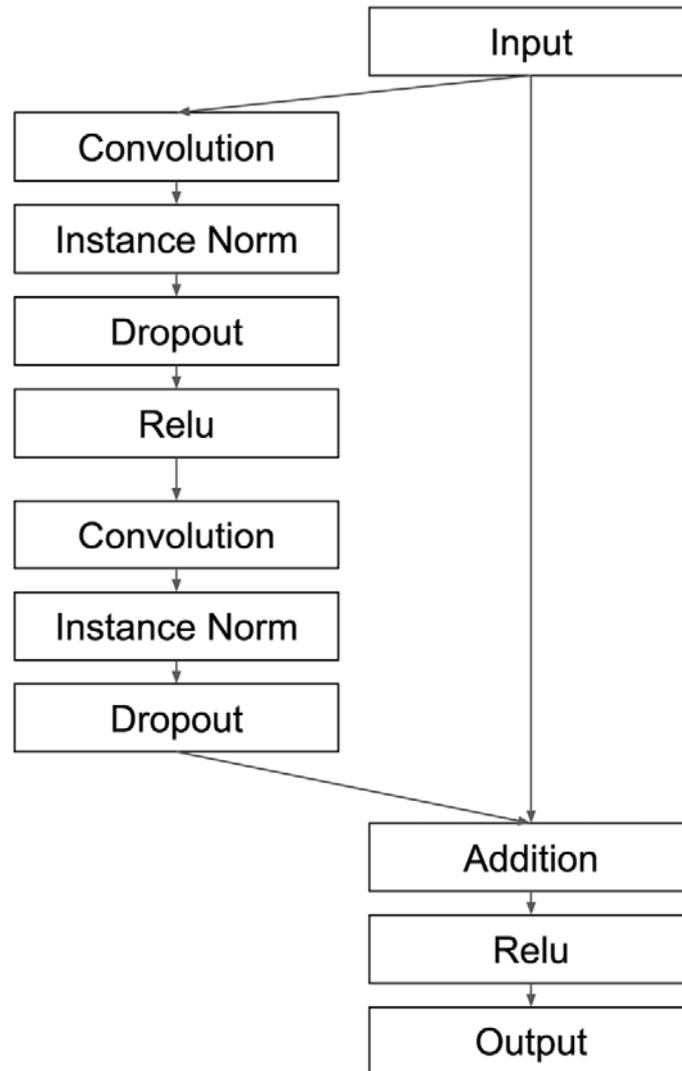

Figure S1. The architecture of a basic residual block.

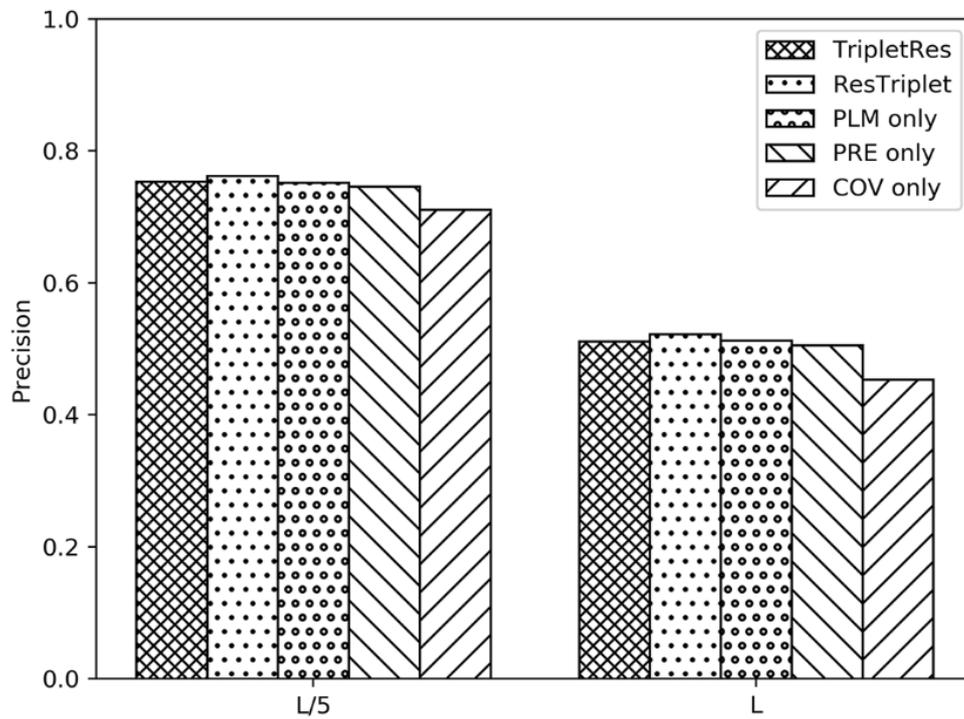

Figure S2. Mean precisions of long-range top L and top L/5 contacts of TripletRes and ResTriplet on all CASP13 targets, compared to the predictors trained on the component features from the covariance matrix feature (COV), the precision matrix feature (PRE) and the coupling matrix of the inverse Potts model feature (PLM).

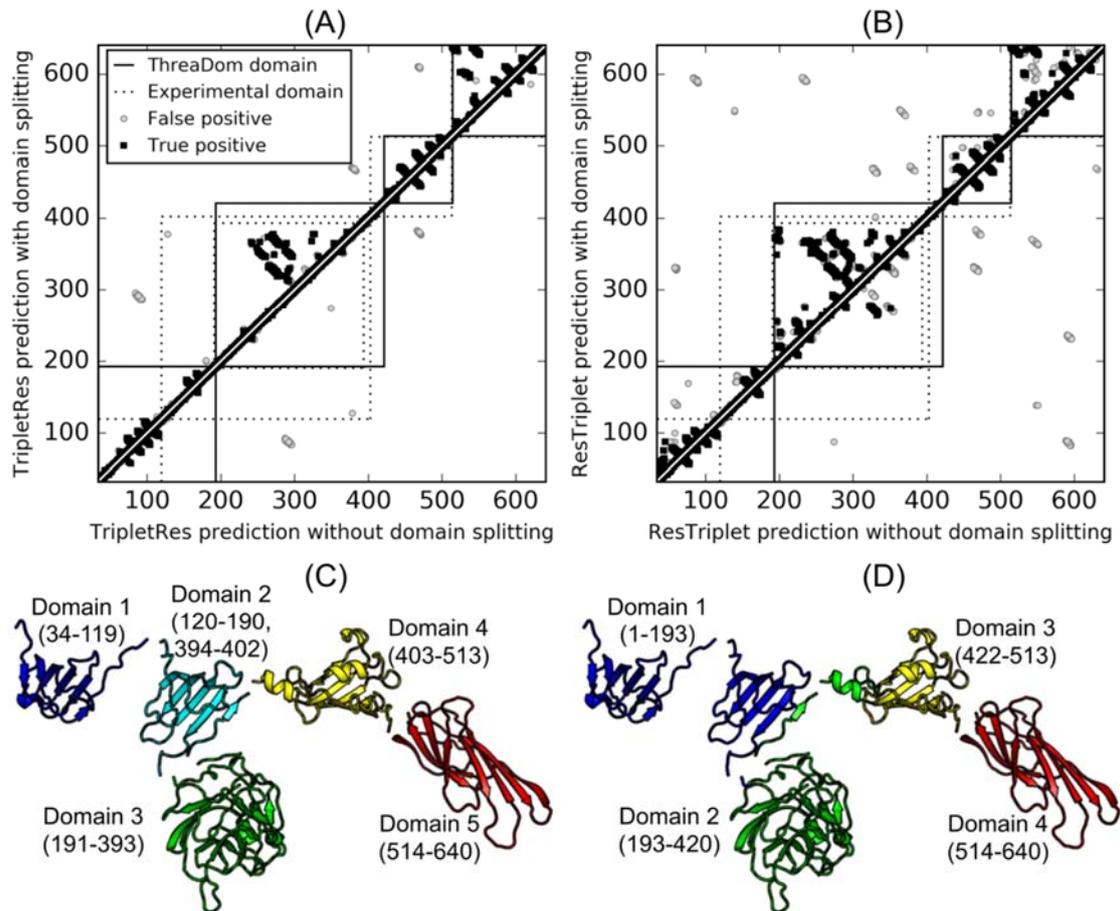

Figure S3. Domain partitioning and contact prediction results for T0981 in CASP13. **(A)** Contact prediction by TripleRes with domain partitioning versus those without domain partitioning. Grey and black dots are false and true positive predictions respectively, and solid and dotted lines mark the domain boundaries by ThreaDom and experimental assignments, respectively. **(B)** Same as **(A)** but for ResTriplet. **(C)** Domain partitioning from experimental structure. **(D)** Domain partitioning by ThreaDom prediction.

Supporting Tables

Table SI. Summary of contact-map predictions by ResTriplet and TripletRes on all 122 domains in CASP13.
